XEI Rate Updater for SAP Business One – Installation, first start, license and scheduled update

XEI.RateUpdater · Version 1.0.0

Contents

Requirements
Installation
First start
License
Scheduled update with Windows
Support

Requirements

SAP Business One	10.0 or later, with the Service Layer
Database	Microsoft SQL Server or SAP HANA (on SAP HANA a test during installation is recommended)
System	Windows 10 and 11, Windows Server 2016 and later, 64-bit; Microsoft Edge WebView2 Runtime
Network	internet access to the chosen rate source
Program languages	Italian, English, German, French, Spanish, Turkish

Installation

1. Download the program zip file from the download page.
2. Extract the folder from the zip file to the PC, for example to `C:\XEI\RateUpdater`.
3. Start **XEI.RateUpdater.exe**. The program already contains .NET. It requires **Microsoft Edge WebView2 Runtime**, which is usually already there: if it is missing, the program says so and offers to download it.

The program has no setup. Settings and history are stored in the Windows data folder shared by all users of the PC. To update the program, replace the folder with the new one: settings and history are kept.

First start

When the program opens for the first time, the **First start** page appears, with the first-start code already filled in.

1. **SAP connection**: *Service Layer address* and *SAP companies*; then **Test the connection**.
2. **Sign-in and first administrator**:
   - *Operator sign-in*: **Each person's SAP user** or **Own users and technical SAP user**;
   - *SAP user of the first administrator* (for example `manager`);
   - *Technical SAP user* and password: they are needed for the automatic update. A dedicated user is best, with only the permission to write exchange rates.
3. **Save and restart**.

Afterwards, the same settings are in **Settings › SAP**. The rate source and the automatic update are in **Settings › Exchange rates**.

License

The program works with a **license code** issued by XEI.

Scope	Applies to
Single company	one SAP database
Server	all the companies of the SQL Server or SAP HANA instance
Free	not tied to a database

- **Trial**: 30 days, with the scope Free.
- **License** menu: status, expiry and scope. Paste the code received from XEI into **Enter a license code**: it takes effect immediately, without restarting.
- For a per-company or per-server license the program must be connected, read-only, to the license database (*Settings › License*, **Test connection**): there and on the License page the company and server codes appear, to be sent to license@xeisrl.com.

Scheduled update with Windows

This way the exchange rates are updated every day even with the program closed.

1. Set the **technical SAP user** (Settings › SAP).
2. In Windows open **Task Scheduler** and create a basic task, for example every day at 7:00.
3. Action **Start a program**: `XEI.RateUpdater.exe` in the program folder, with the argument `aggiorna`.
4. In the task properties choose **Run whether user is logged on or not**.

The command updates today's exchange rates and closes without a window; the run appears in the **History**. With several companies add `--societa <database SAP>` (the SAP database), one task for each company. Result for Task Scheduler: **0** succeeded, **1** failed or with a refused currency, **2** wrong arguments.

Alternatively, with the program open, just turn on **Automatic update** in *Settings › Exchange rates*.

Support

For licenses: license@xeisrl.com. For support: info@xeisrl.com. In your request, state the program version (*About* menu) and describe the problem.
